

June 12, 2018

Dear Resident,

Crack sealing is scheduled on your street this year. Crack sealing involves cleaning cracks in the asphalt pavement and filling them with a bituminous crack sealing product. During this process, streets will remain open to traffic except during short periods when the contractor is completing work in front of driveways or within intersections. Please use caution when driving during this maintenance operation. Minimal to no traffic delays are expected with this process. This work is anticipated to begin June 15, 2018 depending on the weather.

Please do not use your irrigation system to ensure the road surface remains dry and allows proper bonding to the pavement.

If you have any questions, please call (952) 953-2400.
